

Solve a system of linear equations by substitution. Determine the simplified form of the equation you get from this substitution.

1. $y = -4x - 17$
 $y = -3x - 14$

2. $y = 2x + 7$
 $y = -2x + 7$

3. $y = -2x - 7$
 $y = -3x - 13$

4. $y = 2x - 14$
 $y = 3x - 22$

5. $y = 7x - 13$
 $y = x - 1$

6. $y = 6x - 21$
 $y = -5x + 12$

7. $y = 2x - 5$
 $y = -7x - 14$

8. $y = -2x + 14$
 $y = 6x - 18$

9. $y = -4x + 12$
 $y = -3x + 11$

10. $y = -5x - 13$
 $y = 7x + 11$

11. $y = 4x - 4$
 $y = 5x - 7$

12. $y = 2x - 9$
 $y = x - 2$
